

Oil Tank Removal Fairfax Va

Willard Environmental Group, Inc. (WEG) is a family-owned, environmental consulting firm that will provide the most professional and personal attention you can find in the oil tank service industry today. The president of the company is Billy Willard, who is contributing his significant experience, knowledge, and business skill to satisfy every customer with one on one personal attention. Mr. Willard is an area expert, with over 20 years of experience on environmental issues. These include home heating oil tank removal and installation, oil tank inspection, commercial underground & aboveground storage tanks, environmental site assessments, and much more. We also specialize in the remediation of fuel oil contamination caused by oil tank leaks. Mr. Willard has a very good reputation with many residential, commercial and governmental agencies.

Picture Oil Tank Removal

There are several reasons why you would want to remove your underground oil tank. If you are converting to natural gas or installing an above ground oil tank for your home heating needs. Most importantly, WEG strongly recommends removing your underground oil tank if you plan to sell your home. Selling your home is stressful enough even without any major complications. However, having your oil tank removed, inspected and the soil tested will eliminate any potential problems you would have encountered if your oil tank remained on your property. Removing your underground oil tank and obtaining closure will satisfy the most stringent of home inspections or due diligence by future homebuyers. WEG can help, beginning with a free consultation.

Tank Testing

There are many reasons that a homeowner may want an oil tank test. Whether your reason is selling a home, obtaining new insurance, or just peace of mind, WEG can provide you with reliable and accurate results. When you contact WEG for a free consultation, a representative will ask preliminary questions concerning the location and nature of your underground oil tank then set up a time and day for your oil tank test. A hand auger will be used to install 3" diameter soil borings around your oil tank from which the soil samples will be extracted. All soil borings will be extended to a depth beyond the base of your oil tank to provide an accurate assessment of the soil below your oil tank.
